

Fukuroi City

Flood Hazard Map

Full Area Map [Back: (1) Mitsukawa / Imai Area]

- This Flood Hazard Map shows areas expected to be inundated, as well as estimated water depth, sediment disaster hazard areas, and designated emergency evacuation sites in the event that they are inundated, when levees are broken or overflow on the **Ota River System, including the Ota River, Haranoya River, Shikiji River, Ugari River, or Saka River**, due to rainfall at the maximum level expected for the Ota River Basin (629.5 mm of rainfall in 24 hours).
- If there is danger of rivers flooding, the city will issue an evacuation advisory. However, in the event of a sudden disaster, the city may not be able to issue an advisory warning in time. Even if there is no evacuation advisory, evacuate if you feel you are in danger. The most important thing you can decide for yourself is when to evacuate according to your circumstances.
- This map shows water depth due to flooding of target rivers in estimated rainfall conditions, and does not include flooding from rivers or water channels other than target rivers, so there is the possibility of flooding outside of the inundation estimation areas shown on the map.

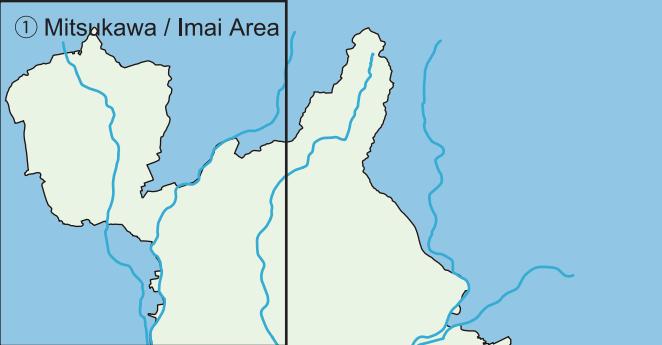

Made March 2019

Inquiries regarding Fukuroi
City Flood Hazard Maps

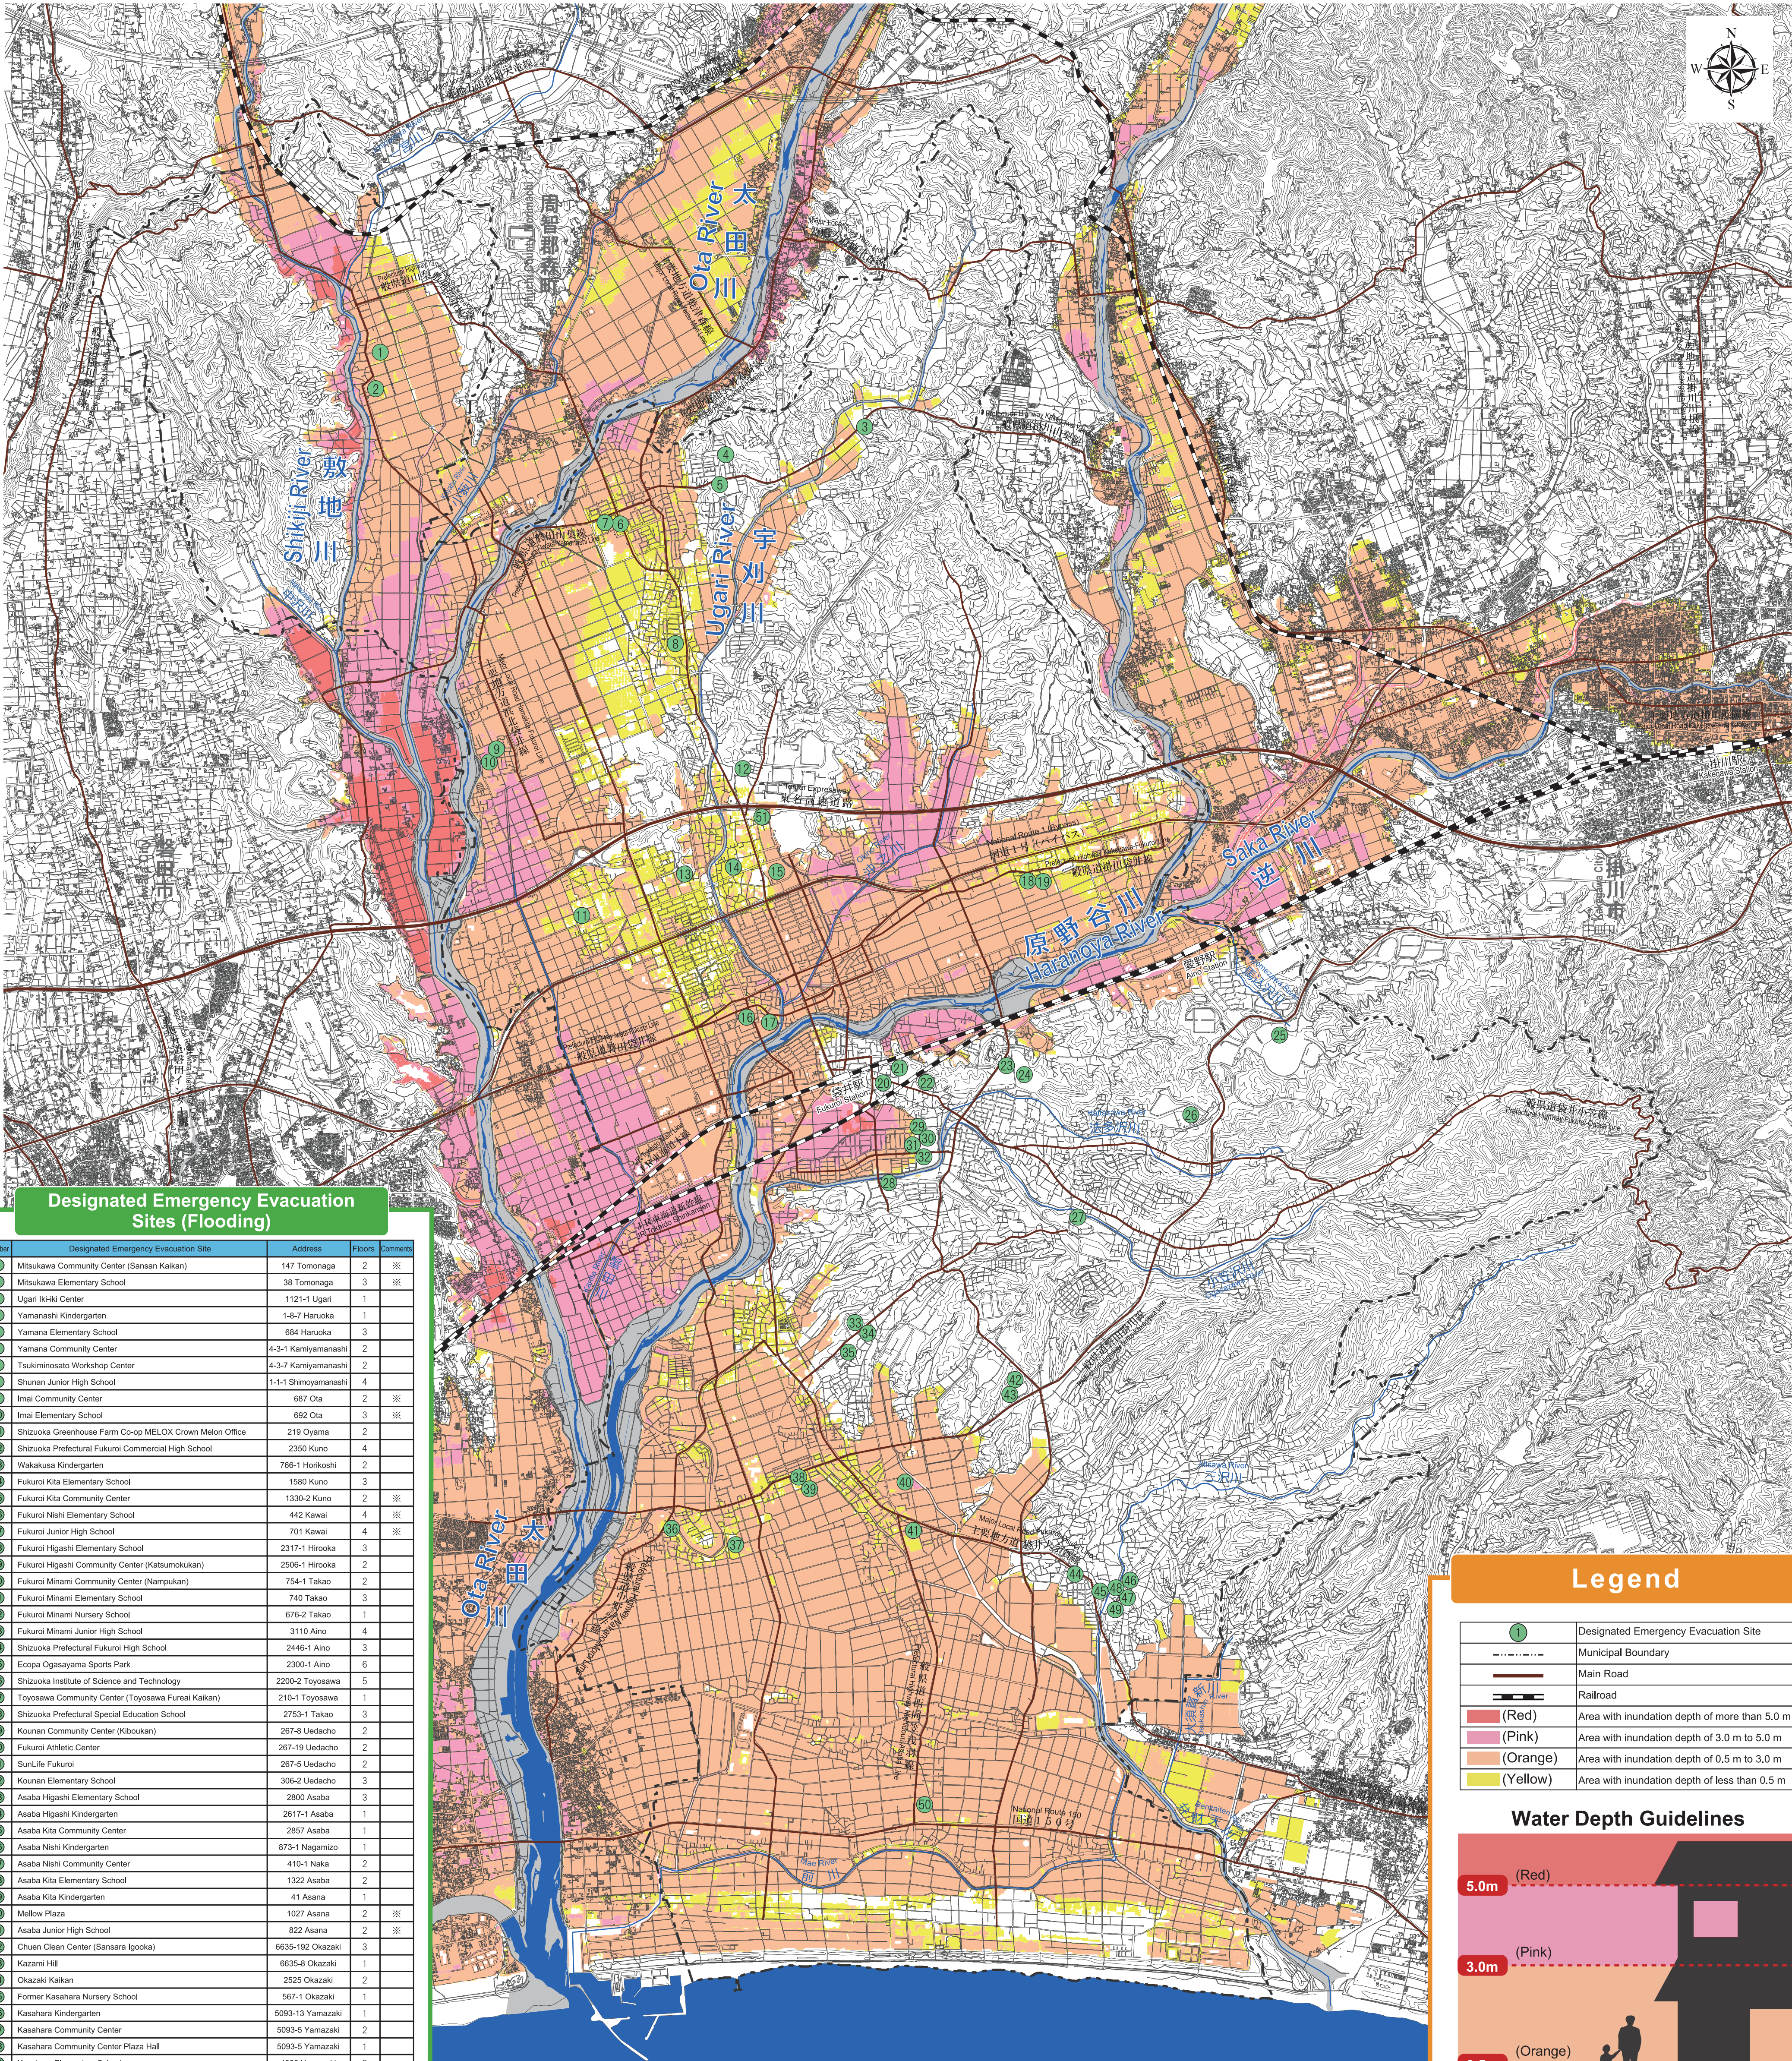

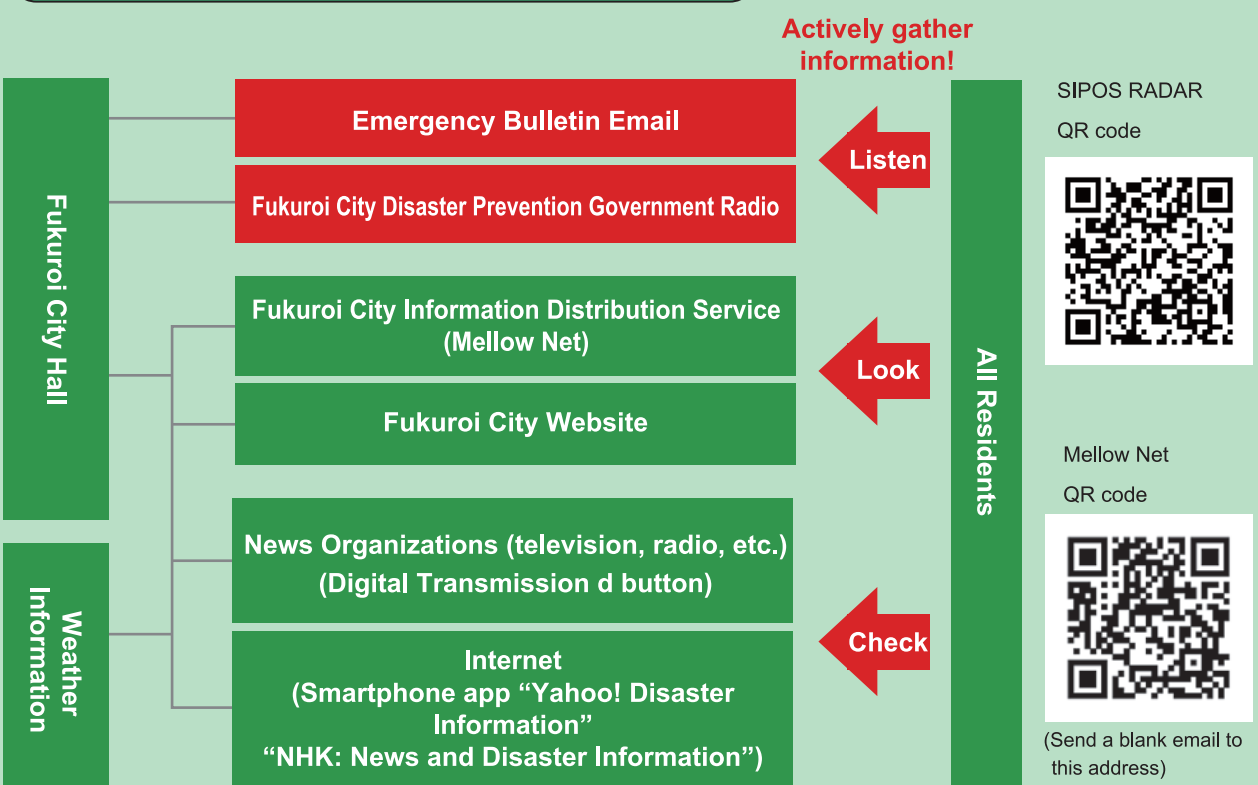

●Regarding inundation estimates: Fukuroi City Urban Construction Department,
Construction Division
1-1 Araya 1-chome, Fukuroi-shi
